

At ZMN Silent Pods, we specialize in creating high-quality acoustic pods designed to bring focus, privacy, and comfort into modern work environments.

Our pods combine functionality, design, and acoustic performance to provide quiet spaces for calls, meetings, concentrated work, and moments of privacy within open offices and dynamic workplaces.

With a strong focus on quality, ventilation, durability, and aesthetics, our products are used by companies across various industries. From compact phone booths to larger meeting pods, we offer solutions that fit seamlessly into contemporary interiors.

We believe that every workspace deserves a space of calm — a place where people can work, communicate, and recharge without distraction.

ZMN

Movable silence booth

FLEXIBILITY

ZMN PODS, a creative silent space, fulfilling your demands for various creative works.

The self-developed carbon polymer composite panel, aviation aluminum and insulating glass forms the main structure of the booth. SOLIDWORKS mechanics modeling simplifies the booth assembly with only one type of fastener. INSUL MARSHALL ACOUSTIC simulation ensures well designed and performed sound transmission & insulation property of the booth.

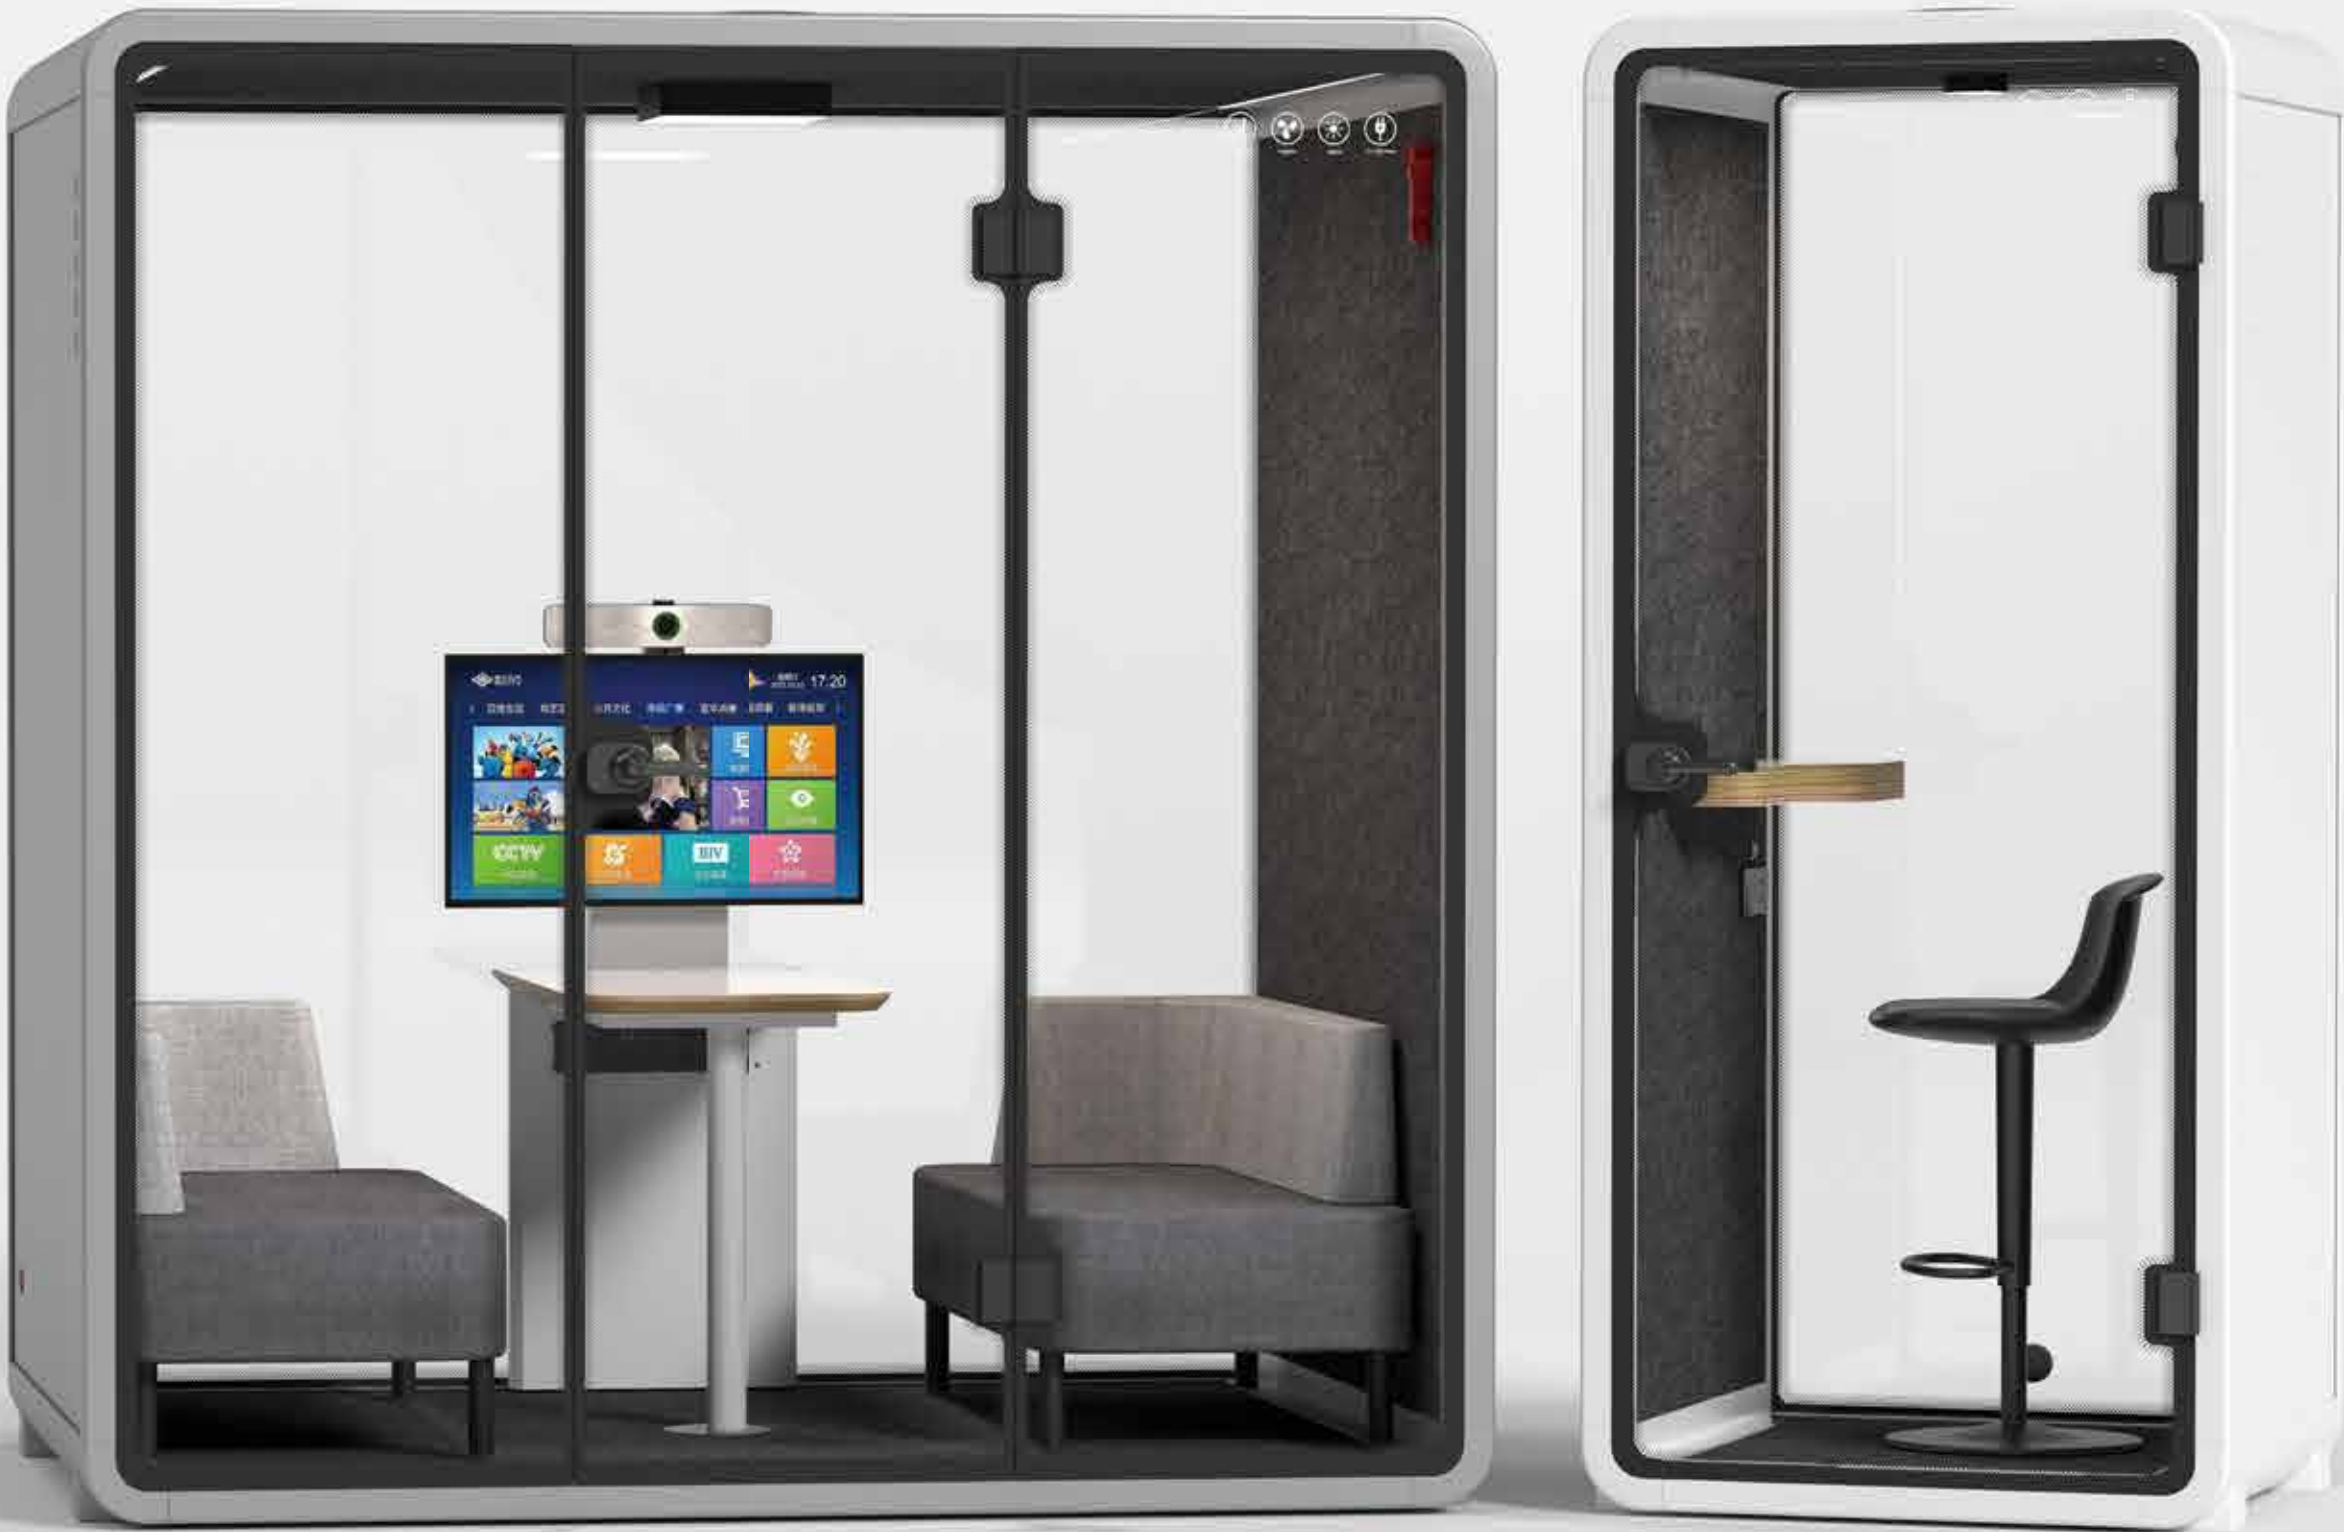

ZMN PODS is a powerful and useful, though not the most perfect mini-space

Movable silence booth

THE Focus SERIES
MOVABLE
ZMN SILENT PODS

FOCUS CONTRACTED
FOCUS SERIES "SILENT PODS" PROMOTES LOW-CARBON SIMPLE, SAFE AND PRACTICALISM.
OPTIMIZE NON-ESSENTIAL FEATURES AND CONFIGURATIONS.
THE FINE R-ANGLE APPEARANCE AND ELEGANT COLOR SCHEME MAKE IT LOOKS DELICATE,
AND EASILY INTEGRATED INTO THE ENVIRONMENT.

LOW CARBON

ZMN SILENT PODS IS THE FIRST COMPANY USE RECYCLED CARBON PLASTIC MATERIALS.

FOR EACH ZMN SILENT PODS:

CARBON FOOTPRINT <0.071KG CO₂E, ENERGY CONSUMPTION <0.2MJ

AIR ACIDIFICATION <0.0001KG SO₂E, WATER EUTROPHICATION <0.00002 PO₄

CARE FOR OUR GLOBAL HOME WITH TECHNOLOGY

Sound insulation tempered glass

With multiple laboratory tested results, conventional glass is not able to fulfill our needs to achieve our desired noise reduction performance, we had tested and chosen to use tempered glass.

Damping feet

Bearing capacity and damping coefficient are the basic data for designing vibration-damping products.

ZMN SILENT PODS insists on the use of virgin rubber modified material for damping parts because such rubber has much better damping coefficient and it is more durable. At the bottom of ZMN SILENT PODS, there are four damping "feet" to supporting the booth. Thanks to the damping "feet", the Silent pod is not standing on the floor directly; however, there is an 8mm gap between the bottom and floor. Therefore, the acoustic bridge is largely prevented between the booth and the floor. The damping feet design makes it easier to adapt to different ground conditions. More importantly, the 8mm gap is specially designed for a movable PODS. This gap is just good for our moving tool. Moving the Silent Pods on the same floor is no longer an exhausting work!

Turbofresh air system

High air pressure and low noise Centrifugal fan, and labyrinth type air ducts effectively reduce the possibility of fugitive sound inside and outside the booth. With the 125m³/h large air volume operation efficiency, air circulates every two minutes, and these ensure good oxygen content and negative carbon dioxide pressure in the pods.

Preferred furniture

The ergonomically designed furniture configuration for the pods space is an important component of the ZMN SILENT PODS office and leisure scenarios.

At the same time, our designers are prepared for predictable expansion, each cabin is pre-programmed with furniture installation nodes for different applications.
